

mf-agents

Purpose

Owns AI Agents UI: agent catalog/list pages, agent config forms, run/trigger controls, and execution status panels.

Responsibility boundary

Controls agent management and agent-run experience in UI; does not own global prompt-provider settings or platform auth screens.

Direct module dependencies

- None

Solution membership

- `ai`

Source

`modules/microfrontends/ai/mf-agents`

mf-assistants

Purpose

Owns Assistants UI: assistant chat/workspace views, assistant configuration panels, and assistant session interaction components.

Responsibility boundary

Controls assistant user experience and assistant-scoped state; does not own shared identity/profile UI or infrastructure telemetry pages.

Direct module dependencies

- `mf-requests`

Solution membership

- `ai`

Source

`modules/microfrontends/ai/mf-assistants`

mf-auth

Purpose

Owns Auth UI: sign-in/sign-up/reset flows, session/security screens, and authentication guard/redirect UX behavior.

Responsibility boundary

Controls authentication-related frontend flows and auth UI state; does not own identity profile management beyond auth scope or business-domain pages.

Direct module dependencies

- None

Solution membership

- `security`

Source

`modules/microfrontends/security/mf-auth`

mf-calls

Purpose

Owens Calls UI: call session screens, call controls, call participant/status panels, and call history presentation widgets.

Responsibility boundary

Controls call-related interaction surfaces and call session state in UI; does not own thread messaging UI or provider transport settings.

Direct module dependencies

- None

Solution membership

- `ai`

Source

`modules/microfrontends/communications/mf-calls`

mf-chats

Purpose

Owns Charts UI: reusable communication/report chart widgets, chart configuration controls, and chart drill-down interactions.

Responsibility boundary

Controls chart-rendering UX components for this module scope; does not own source event ingestion or global dashboard layout shell.

Direct module dependencies

- None

Solution membership

- `ai`

Source

`modules/microfrontends/communications/mf-chats`

mf-classifier

Purpose

Provides the mf-classifier capability in the content domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/content/mf-classifier`

mf-community

Purpose

Owns Community UI: community feed/list pages, community post/detail views, and moderation/community action controls.

Responsibility boundary

Controls community-specific user interactions and layouts; does not own external social connector settings or direct call interfaces.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/communications/mf-community`

mf-contexts

Purpose

Provides the mf-contexts capability in the ai domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- `ai`

Source

`modules/microfrontends/ai/mf-contexts`

mf-dag

Purpose

Owns DAG Automation UI: workflow graph editor/viewer, node/link configuration dialogs, and run-status monitoring screens.

Responsibility boundary

Controls DAG visualization and workflow editing experience; does not own scheduler-wide cron management UI or webhook endpoint management.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/automation/mf-dag`

mf-dashboards

Purpose

Owns Analytics Dashboard UI: overview dashboards, KPI cards, trend charts, and dashboard-level filters/date ranges.

Responsibility boundary

Controls dashboard composition and analytics overview interactions; does not own raw log explorer UI or telemetry event-detail tooling.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/analytics/mf-dashboards`

mf-docs

Purpose

Owns Docs UI: document browsing, document detail views, editing/preview interfaces, and documentation navigation components.

Responsibility boundary

Controls document-centered frontend workflows and UI states; does not own markdown engine internals or binary media storage tooling.

Direct module dependencies

- None

Solution membership

- `content`

Source

`modules/microfrontends/content/mf-docs`

mf-dumps

Purpose

Owens Data Dumps UI: export/dump creation forms, dump history tables, download actions, and dump status/progress indicators.

Responsibility boundary

Controls user-facing dump/export workflows and status presentation; does not own storage/archive backend execution internals.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/data/mf-dumps`

mf-functions

Purpose

Provides the mf-functions capability in the ai domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/ai/mf-functions`

mf-gallery

Purpose

Owens Gallery UI: media gallery grids, media preview/detail views, gallery organization controls, and gallery filtering/search.

Responsibility boundary

Controls gallery browsing and media curation interactions; does not own backend transcoding pipelines or storage-provider internals.

Direct module dependencies

- None

Solution membership

- `content`

Source

`modules/microfrontends/content/mf-gallery`

mf-landing

Purpose

Owens Landing UI: landing pages, hero/section composition, and public-facing content presentation blocks.

Responsibility boundary

Controls landing-page layouts and interaction behavior; does not own authenticated admin panels or analytics data collection internals.

Direct module dependencies

- None

Solution membership

- `content`

Source

`modules/microfrontends/content/mf-landing`

mf-logs

Purpose

Owens Logs UI: log stream/table views, log search/filter controls, and log detail drill-down panels for operators.

Responsibility boundary

Controls log exploration and troubleshooting UX; does not own product usage dashboards or agent/business domain pages.

Direct module dependencies

- None

Solution membership

- `analytics`

Source

`modules/microfrontends/analytics/mf-logs`

mf-markdown

Purpose

Owens Markdown UI: markdown editor surfaces, live preview panels, markdown content formatting controls, and publish-ready views.

Responsibility boundary

Controls markdown authoring/presentation UX; does not own document permissions/auth or media conversion infrastructure.

Direct module dependencies

- None

Solution membership

- `content`

Source

`modules/microfrontends/content/mf-markdown`

mf-orders

Purpose

Provides the mf-orders capability in the business domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/business/mf-orders`

mf-requests

Purpose

Owns Requests UI: request inbox/list screens, request detail/timeline views, and request status/action forms.

Responsibility boundary

Controls request lifecycle user interactions in the frontend; does not own chats/threads modules or billing execution pages.

Direct module dependencies

- None

Solution membership

- `requests`

Source

`modules/microfrontends/business/mf-requests`

mf-scripts

Purpose

Provides the mf-scripts capability in the content domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/content/mf-scripts`

mf-secrets

Purpose

Provides the mf-secrets capability in the security domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/security/mf-secrets`

mf-sheduller

Purpose

Owns Scheduler UI: recurring job configuration pages, schedule calendars/tables, and job run history/next-run indicators.

Responsibility boundary

Controls schedule creation and scheduling-state visualization; does not own DAG graph editor or domain-specific task content editors.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/automation/mf-sheduller`

mf-static

Purpose

Provides the mf-static capability in the content domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/content/mf-static`

mf-struct

Purpose

Owens Structured Content UI: schema-driven content forms, structured block editors, and structured content preview/validation views.

Responsibility boundary

Controls structured content editing experiences and UI validation states; does not own final channel delivery adapters.

Direct module dependencies

- None

Solution membership

- `content`

Source

`modules/microfrontends/content/mf-struct`

mf-telemetry

Purpose

Owns Telemetry UI: technical signal views, metrics graphs, event timelines, and service-health visual components.

Responsibility boundary

Controls telemetry-specific visualizations and filters; does not own billing/usage reporting UX or shell-level navigation.

Direct module dependencies

- None

Solution membership

- `analytics`

Source

`modules/microfrontends/analytics/mf-telemetry`

mf-threads

Purpose

Owens Threads UI: threaded conversation lists, thread detail panels, reply composers, and thread state indicators.

Responsibility boundary

Controls thread-centric communication experience; does not own push/email transport configuration or external social channel adapters.

Direct module dependencies

- None

Solution membership

- `ai`

Source

`modules/microfrontends/communications/mf-threads`

mf-usage

Purpose

Owens Usage UI: feature-consumption charts, usage counters, quota/limit displays, and usage period comparison screens.

Responsibility boundary

Controls usage analytics presentation and interaction; does not own charge/payment screens or low-level telemetry ingestion tools.

Direct module dependencies

- None

Solution membership

- `analytics`

Source

`modules/microfrontends/analytics/mf-usage`

mf-webhooks

Purpose

Owns Webhooks UI: webhook endpoint list/forms, event subscription settings, delivery history, and retry controls.

Responsibility boundary

Controls webhook management flows and delivery observability UX; does not own downstream business processing screens.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microfrontends/automation/mf-webhooks`

ms-access

Purpose

Manages access-control rules and permission checks.

Responsibility boundary

Owns authorization policy evaluation and access scopes; does not own identity proofing/authentication login.

Direct module dependencies

- None

Solution membership

- `security`

Source

`modules/microservices/security/ms-access`

ms-agent

Purpose

Runs autonomous AI-agent workflows and orchestrates multi-step LLM tasks.

Responsibility boundary

Owns agent execution logic and task orchestration; does not own core auth, billing, or long-term data storage.

Direct module dependencies

- None

Solution membership

- `ai`

Source

`modules/microservices/ai/ms-agent`

ms-assistant

Purpose

Provides assistant-style AI interactions for end users and internal tools.

Responsibility boundary

Owns assistant dialog behavior and request handling; does not own model provider infrastructure or user identity.

Direct module dependencies

- None

Solution membership

- `ai`

Source

`modules/microservices/ai/ms-assistant`

ms-auth

Purpose

Handles authentication workflows and credential/session validation.

Responsibility boundary

Owns auth flows and token/session issuance logic; does not own third-party OAuth provider adapters outside auth scope.

Direct module dependencies

- None

Solution membership

- `security`

Source

`modules/microservices/security/ms-auth`

ms-billing

Purpose

Handles billing domain operations such as plans, charges, and billing state.

Responsibility boundary

Owns billing workflows and billing records; does not own external payment gateway internals.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/business/ms-billing`

ms-calls

Purpose

Provides call-related communication workflows and call session handling.

Responsibility boundary

Owns call-session domain logic and call metadata; does not own external telecom provider infrastructure.

Direct module dependencies

- None

Solution membership

- `ai`

Source

`modules/microservices/communications/ms-calls`

ms-chats

Purpose

Generates and serves chart-oriented communication or reporting artifacts.

Responsibility boundary

Owns chart composition and chart data shaping; does not own raw analytics event collection.

Direct module dependencies

- None

Solution membership

- `ai`

Source

`modules/microservices/communications/ms-chats`

ms-classifier

Purpose

Classifies incoming content/items into categories, labels, or intents.

Responsibility boundary

Owns classification logic and label assignment; does not own source content ingestion pipelines.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/content/ms-classifier`

ms-community

Purpose

Supports community-level interactions and social communication features.

Responsibility boundary

Owens community entities and interactions; does not own third-party social network connectors.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/communications/ms-community`

ms-contexts

Purpose

Provides the ms-contexts capability in the ai domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- `ai`

Source

`modules/microservices/ai/ms-contexts`

ms-counters

Purpose

Provides the ms-counters capability in the analytics domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- `analytics`

Source

`modules/microservices/analytics/ms-counters`

ms-dag

Purpose

Executes DAG-based automation pipelines and dependency-aware jobs.

Responsibility boundary

Owns workflow graph scheduling/execution; does not own domain-specific business rules inside downstream services.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/automation/ms-dag`

ms-dashboard

Purpose

Provides the ms-dashboard capability in the analytics domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/analytics/ms-dashboard`

ms-dumps

Purpose

Creates and manages data dumps/export snapshots.

Responsibility boundary

Owns dump generation, packaging, and retrieval metadata; does not own long-term archival platform.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/data/ms-dumps`

ms-environment

Purpose

Provides the ms-environment capability in the security domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/security/ms-environment`

ms-equipment

Purpose

Manages equipment entities, metadata, and related lifecycle operations.

Responsibility boundary

Owns equipment catalog and state transitions; does not own logistics carrier execution.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/business/ms-equipment`

ms-events

Purpose

Provides the ms-events capability in the business domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/business/ms-events`

ms-files

Purpose

Provides file metadata APIs and file-management workflows.

Responsibility boundary

Owns file records and file-level operations; does not own object storage implementation details.

Direct module dependencies

- None

Solution membership

- `requests`

Source

`modules/microservices/data/ms-files`

ms-finance

Purpose

Provides the ms-finance capability in the business domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/business/ms-finance`

ms-functions

Purpose

Provides the ms-functions capability in the ai domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/ai/ms-functions`

ms-galery

Purpose

Manages gallery-style media collections and related metadata.

Responsibility boundary

Owns gallery entities and organization logic; does not own binary object storage backend.

Direct module dependencies

- None

Solution membership

- `content`

Source

`modules/microservices/content/ms-galery`

ms-identity

Purpose

Maintains identity profiles and identity-linked core attributes.

Responsibility boundary

Owns identity records and identity lifecycle state; does not own fine-grained permission policies.

Direct module dependencies

- None

Solution membership

- `security`

Source

`modules/microservices/security/ms-identity`

ms-kubernetes

Purpose

Provides the ms-kubernetes capability in the automation domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/automation/ms-kubernetes`

ms-logs

Purpose

Collects and stores operational logs for platform services.

Responsibility boundary

Owns log ingestion and retrieval APIs; does not own business metrics or tracing strategy.

Direct module dependencies

- None

Solution membership

- `analytics`

Source

`modules/microservices/analytics/ms-logs`

ms-markdown

Purpose

Processes markdown content, rendering/transformation workflows, and related APIs.

Responsibility boundary

Owens markdown conversion/parsing behavior; does not own rich media transcoding.

Direct module dependencies

- None

Solution membership

- `content`

Source

`modules/microservices/content/ms-markdown`

ms-modelconvertor

Purpose

Converts models/data formats between internal and external representations.

Responsibility boundary

Owns conversion/transformation routines; does not own upstream model training or downstream serving.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/convertors/ms-modelconvertor`

ms-notify

Purpose

Coordinates notification workflows across channels.

Responsibility boundary

Owns notification orchestration and delivery policy; does not own low-level provider-specific sending adapters.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/communications/ms-notify`

ms-oauth

Purpose

Implements OAuth-specific authorization flows and provider handshakes.

Responsibility boundary

Owens OAuth grant flow handling and token exchange; does not own non-OAuth authentication methods.

Direct module dependencies

- None

Solution membership

- `security`

Source

`modules/microservices/security/ms-oauth`

ms-orders

Purpose

Provides the ms-orders capability in the business domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/business/ms-orders`

ms-push

Purpose

Provider adapter for push-notification delivery.

Responsibility boundary

Owns push provider integration details; does not own notification business targeting logic.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/providers/ms-push`

ms-requests

Purpose

Processes service/business requests submitted by users or organizations.

Responsibility boundary

Owns request lifecycle and status transitions; does not own messaging transport or file storage internals.

Direct module dependencies

- None

Solution membership

- `requests`

Source

`modules/microservices/business/ms-requests`

ms-resonus

Purpose

Provides the ms-resonus capability in the communications domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/communications/ms-resonus`

ms-reviews

Purpose

Stores and manages user or partner reviews and moderation-related metadata.

Responsibility boundary

Owns review entities and review state; does not own community thread infrastructure.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/business/ms-reviews`

ms-sales

Purpose

Handles sales-domain entities, sales flows, and related metrics preparation.

Responsibility boundary

Owns sales lifecycle and sales data logic; does not own payment gateway transaction processing.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/business/ms-sales`

ms-scripts

Purpose

Provides the ms-scripts capability in the content domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/content/ms-scripts`

ms-secrets

Purpose

Provides the ms-secrets capability in the security domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/security/ms-secrets`

ms-ses

Purpose

Provider adapter for AWS SES email delivery.

Responsibility boundary

Owns SES-specific sending integration and mapping; does not own email template authoring domain.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/providers/ms-ses`

ms-scheduler

Purpose

Stores and serves automation schedule data and execution history.

Responsibility boundary

Owns CRUD/list/stats for cron entries and history records; does not execute workflows, timers, retries, or background dispatch.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/automation/ms-scheduler`

ms-sms

Purpose

Provider adapter for SMS delivery channels.

Responsibility boundary

Owns SMS provider connectivity and payload formatting; does not own campaign/business segmentation rules.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/providers/ms-sms`

ms-smtp

Purpose

Provider adapter for SMTP-based email delivery.

Responsibility boundary

Owns SMTP transport and protocol-level delivery handling; does not own high-level notification orchestration.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/providers/ms-smtp`

ms-staff

Purpose

Manages staff records, roles, and staff-centric domain operations.

Responsibility boundary

Owns staff domain data and workflows; does not own authentication credential issuance.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/business/ms-staff`

ms-static

Purpose

Provides the ms-static capability in the content domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/content/ms-static`

ms-store

Purpose

Implements generic storage-domain operations for service data.

Responsibility boundary

Owns store-facing data access APIs in this domain; does not own business semantics of calling services.

Direct module dependencies

- None

Solution membership

- `requests`

Source

`modules/microservices/data/ms-store`

ms-struct

Purpose

Builds and serves structured content representations used by other services.

Responsibility boundary

Owns structure modeling and schema-level shaping; does not own final channel-specific rendering.

Direct module dependencies

- None

Solution membership

- `content`

Source

`modules/microservices/content/ms-struct`

ms-telemetry

Purpose

Captures telemetry events and technical health signals from services.

Responsibility boundary

Owns telemetry event intake and normalization; does not own product analytics definitions.

Direct module dependencies

- None

Solution membership

- `analytics`

Source

`modules/microservices/analytics/ms-telemetry`

ms-threads

Purpose

Manages threaded conversations and related message context.

Responsibility boundary

Owns thread lifecycle and thread-level metadata; does not own transport gateways for email/SMS/push.

Direct module dependencies

- None

Solution membership

- `ai`

Source

`modules/microservices/communications/ms-threads`

ms-usage

Purpose

Tracks usage counters and consumption metrics for product features.

Responsibility boundary

Owns usage measurement and aggregation; does not own invoicing or payment execution.

Direct module dependencies

- None

Solution membership

- `analytics`

Source

`modules/microservices/analytics/ms-usage`

ms-webhooks

Purpose

Receives and dispatches webhook events for external integrations.

Responsibility boundary

Owns webhook transport, validation, and delivery attempts; does not own target-system business processing.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/microservices/automation/ms-webhooks`

wf-dialogue-summary

Purpose

Provides the wf-dialogue-summary capability in the workflow domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/workflows/wf-dialogue-summary`

wf-file-analysis

Purpose

Provides the wf-file-analysis capability in the workflow domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- `requests`

Source

`modules/workflows/wf-file-analysis`

wf-file-analyze

Purpose

Provides the wf-file-analyze capability in the workflow domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- Not included in a predefined solution

Source

`modules/workflows/wf-file-analyze`

wf-file-unpack

Purpose

Provides the wf-file-unpack capability in the workflow domain.

Responsibility boundary

The module boundary is defined by its public contracts and implementation directory.

Direct module dependencies

- None

Solution membership

- `requests`

Source

`modules/workflows/wf-file-unpack`
